I am a machine learning engineer with experience in computer vision based applications. I am a recent graduate from Simon Fraser University, Canada. I have worked with semi-supervised learning and class-imbalance problems. I have experience in implementing machine learning algorithms at scale.

SKILLSET

Software: MATLAB, Octave

Languages and Tools: PyTorch, TensorFlow, Python, Numpy, Scipy, OpenCV, Matplotlib, Docker as well as AWS cloud services like S3, EC2 and Amazon Sagemaker

EDUCATION

Master of Applied Science (Computer Vision)

Simon Fraser University, Canada, January 2021

CGPA: 3.92/4.33

Bachelor of Technology, Electronics and Communication

Uttar Pradesh Technical University, India, June 2016

EXPERIENCE

Machine Learning Intern

February 2021-present

MILA, Montreal, Canada

- Worked on large scale time-series dataset in the order of millions of data.
- Implemented and scaled data pre-processing to run on cloud; cleaned data into standardized format.
- Working on ordinal classification problem for data modelling and processing geospatial (satellite) data.

Machine Learning Intern

February 2020-August 2020

UrtheCast, Vancouver, Canada

- I individually implemented machine learning system for satellite data (Landsat8, SPARCS, Sentinel 2 dataset) for multi-class prediction of cloud, shadow, and haze.
- Implemented data ingestion pipeline which takes in raw geospatial multi-dimensional data as input and converts it into standardized format.
- Scaled the algorithm using AWS cloud based services, example, EC2 for deployment server, S3 for data storage and docker for creating virtual environment and parallel deployment of multiple training jobs.
- Investigated and implemented optimization methods to improve cloud mask generation from S2 data using the Green, Red Edge, and Water Vapor band.

Graduate Research Assistant

January 2018-February 2021

Networked Robotics and Sensing Laboratory

School of Applied Science, Simon Fraser University, Canada

Project Associate

August 2017-October 2017

Helicopter and VTOL Laboratory

Indian Institute of Technology Kanpur, India

Internship

June 2016-July 2017

*Samsung IoT Innovation Lab, Delhi, India
& Applied Cognitive Science Lab, India*

PROJECTS

RGB-Depth Based Occlusion Aware Target Re-detection [\[Video\]](#) :

- Implemented target re-detection long term tracker using Kinect RGB-D camera.
- Tracker was able to infer & track target with information provided only in first frame.
- Improved average precision by almost 50% as compared to baseline KCF tracker

Deep Attention Models for Human Tracking Using RGBD [\[Paper\]](#):

- Worked in a team of 4 to develop an adaptive appearance model to accurately detect color camouflage, even in the presence of complex natural objects.
- Improved the accuracy by approximately 50% and reduced the type I error by 23% and type II error by 5%.

Celestini Project India:

- At Samsung IoT Lab, developed a prototype video analytic algorithm using Caltech pedestrian dataset to run on Raspberry Pi 3 Model B.
- Worked in a team of 2 where I was responsible for porting the code from MATLAB to Octave. Also, worked on pre-processing the data to clean images, remove noise to infer position, lane and density of vehicles in front of the camera.

Prototype Landslide Risk Communication System [\[Paper\]](#):

- Developed a system which forecasts and communicates occurrence of landslides.
- Conducted field survey and implemented a system for sensor deployment (sensors, microcontroller boards, GSM module and other electrical components).
